METAL ROOF

RURAL CORRUGATED ROOF

Easy Vent

Installation Guide

1
Select a suitable location for the Hydroflow Easy Vent on either a tiled roof surface or a metal roof surface. Mark tile and cut to allow for the flue to pass through the roof to the atmosphere. For metal roofs, mark a circular diameter of 155mm and cut a hole.

2
Fit the Easy Vent flue through the prepared space. The outer ring of the flue will come to rest on the rooftop surrounding the prepared space.
The Easy Vent can be secured directly to the metal roof using screws or rivets.
Tile roof securing is aided by the use of the additional securing ring supplied in the tile roof kit.

3
Fit metal or tile roof seal over the flue and seal/secure to roof.

4
Fit the Easy Vent cowl to the top of the flue, and secure it with supplied pop rivets.

NOTE - INSTALLATION SHOULD ONLY BE CARRIED OUT BY SUITABLY QUALIFIED AND LICENCED PRACTITIONERS IN ACCORDANCE WITH AUSTRALIAN STANDARD AS3500

Optional:
Ember Attack Fire mesh Protection
and insect protection available as per
AS3959- 2018 Amdt1 Where Required
for Bushfire Risk Management
